

PHASE 1: IDEATION PHASE

BRAINSTORMING

Date	28 February 2026
Team ID	LTVIP2026TMIDS76950
Team Size	4
Team Leader	Suresh Kumar V
Team Members	Vemanaboina Lakshmi Prasanna Chengalaraya Akhil Prasad Chittipothula
Project Name	HouseHunt: Finding Your Perfect Rental Home

1. EXECUTIVE SUMMARY

This document presents the brainstorming session outcomes for the House Hunt project, a comprehensive property rental management platform. The brainstorming process involved identifying market gaps, analysing user needs, and conceptualizing a digital solution to streamline property rental processes.

2. MARKET ANALYSIS

2.1 Current Property Rental Landscape

Traditional Process Challenges:

- Multiple intermediaries increasing costs
- Lack of transparency in property information
- Time-consuming property search process
- Manual booking and documentation
- Limited property owner-renter direct interaction
- No centralized platform for property management
- Security concerns in transactions
- Difficulty in verifying property authenticity

2.2 Market Opportunity

Key Statistics:

- Growing urban population requiring rental properties
- Increasing smartphone and internet penetration
- Digital transformation in real estate sector

- Need for transparent, efficient rental platforms
- Rising demand for hassle-free property transactions

Target Market Size:

- Property Owners: Individuals and businesses with rental properties
 - Property Renters: Students, professionals, families seeking rentals
 - Platform Administrators: Real estate management companies
-

3. PROBLEM IDENTIFICATION

3.1 Problems for Property Owners

Problem 1: Limited Reach

- Difficulty in reaching potential renters
- Dependence on local brokers and agents
- High advertising costs
- Limited visibility of property listings

Problem 2: Verification Challenges

- Unable to verify renter credibility
- Concerns about property damage
- Difficulty in background checks
- No standardized verification process

Problem 3: Administrative Burden

- Manual handling of booking requests
- Paperwork for agreements
- Rent collection challenges
- Maintenance request management

Problem 4: Market Competition

- Difficulty standing out in crowded market
- Price comparison challenges
- No platform for showcasing properties
- Limited marketing channels

3.2 Problems for Property Renters

Problem 1: Information Asymmetry

- Limited access to property details
- Hidden costs and charges
- Misleading property descriptions
- Fake listings and fraud

Problem 2: Search Inefficiency

- Time-consuming property search
- Multiple platform visits required
- Lack of advanced filters
- No centralized search mechanism

Problem 3: Booking Complexity

- Complicated booking procedures
- Multiple intermediaries
- Lack of transparency in process
- No direct owner communication

Problem 4: Trust Issues

- Unable to verify property authenticity
- Concerns about owner reliability
- No review or rating system
- Limited recourse for disputes

3.3 Administrative Challenges

Problem 1: Quality Control

- Difficulty maintaining platform quality
- Fake listings proliferation
- Spam and fraudulent activities
- No verification mechanism

Problem 2: User Management

- Managing multiple user types
 - Access control challenges
 - User verification process
 - Dispute resolution
-

4. SOLUTION BRAINSTORMING

4.1 Core Concept

Vision: Create a comprehensive, secure, and user-friendly digital platform that connects property owners directly with potential renters while maintaining quality through administrative oversight.

Mission: To simplify the property rental process through technology, ensuring transparency, security, and efficiency for all stakeholders.

4.2 Key Solution Components

Component 1: Multi-User Platform

- Separate interfaces for Admin, Owner, and Renter
- Role-based access control
- Personalized dashboards
- User-specific features

Component 2: Secure Authentication

- JWT-based authentication system
- Encrypted password storage
- Session management
- Token-based security

Component 3: Admin Approval System

- Quality control mechanism
- Owner verification before platform access
- Spam prevention
- Platform integrity maintenance

Component 4: Property Management

- Complete CRUD operations
- Multiple image uploads
- Detailed property descriptions
- Real-time availability updates

Component 5: Advanced Search & Filtering

- Location-based search
- Property type filters
- Price range filters
- Ad type categorization

Component 6: Booking System

- Direct booking mechanism
 - Owner-renter communication
 - Booking status tracking
 - History maintenance
-

5. FEATURE IDEATION

5.1 Must-Have Features (MVP)

Authentication & Authorization:

- User registration (Admin, Owner, Renter)
- Secure login system
- Password encryption
- Role-based access control
- Session management

For Administrators:

- User management dashboard
- Owner approval/rejection
- View all users
- View all properties
- View all bookings
- Platform monitoring

For Property Owners:

- Property listing creation
- Property editing and deletion
- Multiple image uploads
- Booking request management
- Property availability control
- Analytics dashboard

For Property Renters:

- Property browsing
- Advanced filtering

- Property details viewing
- Direct booking
- Booking history
- Saved properties

5.2 Should-Have Features (Phase 2)

Enhanced Security:

- Email verification
- Two-factor authentication
- Document verification
- Background checks

Communication:

- In-app messaging
- Real-time notifications
- Email notifications
- SMS alerts

Payment Integration:

- Online payment gateway
- Security deposit handling
- Rent payment tracking
- Invoice generation

Advanced Features:

- Property comparison
- Virtual tours
- Rating and review system
- Favourite properties
- Property recommendations

5.3 Could-Have Features (Future Scope)

AI/ML Integration:

- Property price predictions
- Smart recommendations
- Fraud detection

- Chatbot support

Mobile Application:

- Native iOS app
- Native Android app
- Push notifications
- Offline mode

Advanced Analytics:

- Market trend analysis
- User behaviour analytics
- Revenue forecasting
- Performance metrics

Legal Integration:

- Digital contract signing
 - Legal document generation
 - Compliance checking
 - Automated agreements
-

6. TECHNOLOGY BRAINSTORMING**6.1 Technology Stack Considerations****Frontend Options Evaluated:****Option 1: React.js** Selected

- Pros: Component reusability, Virtual DOM, large ecosystem
- Cons: Steep learning curve for beginners
- Decision: Selected for its performance and flexibility

Option 2: Angular

- Pros: Complete framework, TypeScript support
- Cons: Heavier, more complex
- Decision: Rejected due to complexity

Option 3: Vue.js

- Pros: Easy to learn, lightweight
- Cons: Smaller ecosystem

- Decision: Considered but React preferred

Backend Options Evaluated:

Option 1: Node.js + Express Selected

- Pros: JavaScript everywhere, non-blocking I/O, fast
- Cons: Callback hell (solved with async/await)
- Decision: Selected for JavaScript consistency

Option 2: Django (Python)

- Pros: Batteries included, admin panel
- Cons: Different language from frontend
- Decision: Rejected for language consistency

Option 3: Spring Boot (Java)

- Pros: Enterprise-ready, robust
- Cons: Verbose, slower development
- Decision: Rejected due to development speed

Database Options Evaluated:

Option 1: MongoDB Selected

- Pros: Flexible schema, JSON-like documents, scalable
- Cons: No joins (solved with population)
- Decision: Selected for flexibility

Option 2: PostgreSQL

- Pros: ACID compliant, reliable
- Cons: Rigid schema
- Decision: Rejected for flexibility needs

Option 3: MySQL

- Pros: Widely used, stable
- Cons: Less flexible
- Decision: Rejected for schema flexibility

6.2 Supporting Technologies

Selected Tools:

- **Authentication:** JWT (JSON Web Tokens)
- **Password Hashing:** Bcrypt

- **File Upload:** Multer
 - **UI Framework:** Material-UI, Bootstrap
 - **HTTP Client:** Axios
 - **Routing:** React Router
 - **Database ODM:** Mongoose
 - **Development:** Nodemon
 - **Version Control:** Git
 - **Deployment:** Heroku/Vercel (future)
-

7. USER EXPERIENCE BRAINSTORMING

7.1 Design Principles

Simplicity:

- Clean, intuitive interface
- Minimal learning curve
- Clear navigation
- Consistent design patterns

Accessibility:

- Responsive design
- Mobile-friendly
- Fast loading times
- Browser compatibility

Trust & Security:

- Visible security indicators
- Clear privacy policies
- Transparent processes
- Secure transactions

Efficiency:

- Quick property search
- Fast booking process
- Minimal clicks required
- Smart defaults

7.2 User Flow Ideas

Owner Registration Flow:

1. Registration form → 2. Email verification → 3. Admin approval wait → 4. Approval notification → 5. Login → 6. Add property

Renter Booking Flow:

1. Browse properties → 2. Apply filters → 3. View details → 4. Click "Get Info" → 5. Fill booking form → 6. Submit → 7. Wait for owner contact

Admin Approval Flow:

1. Login → 2. View pending owners → 3. Review details → 4. Approve/Reject → 5. Status updated
-

8. COMPETITIVE ANALYSIS

8.1 Existing Solutions

Platform A: (Generic rental platforms)

- Strengths: Large user base, established brand
- Weaknesses: High commission, complex interface
- Opportunity: Better user experience, lower fees

Platform B: (Classified sites)

- Strengths: Wide reach, free listings
- Weaknesses: Lack of verification, poor quality control
- Opportunity: Quality control through admin approval

Platform C: (Real estate portals)

- Strengths: Professional listings
- Weaknesses: Expensive, targeted at buyers
- Opportunity: Focus on rentals, affordable pricing

8.2 Competitive Advantages

Our Differentiation:

1. **Admin Approval System:** Quality control mechanism
2. **Role-Based Access:** Specialized dashboards for each user type
3. **Direct Communication:** No intermediaries needed
4. **Transparency:** Complete property information upfront
5. **Security:** Strong authentication and authorization
6. **Simplicity:** Easy to use interface

7. **Free for Renters:** No charges for property search and booking
-

9. BUSINESS MODEL BRAINSTORMING

9.1 Revenue Streams (Future)

Primary Revenue:

- Property listing fees for owners
- Premium features subscription
- Featured listings
- Advertisement placements

Secondary Revenue:

- Value-added services
- Verification services
- Legal document generation
- Insurance partnerships

9.2 Pricing Strategy

Freemium Model:

- Free: Basic property listings, limited features
- Premium: Unlimited listings, priority support, analytics

Commission Model:

- Percentage of first month's rent
 - Only charged upon successful booking
-

10. RISK ASSESSMENT

10.1 Technical Risks

Risk 1: Security Breaches

- Mitigation: Strong encryption, regular audits, security best practices

Risk 2: Scalability Issues

- Mitigation: Cloud infrastructure, horizontal scaling, load balancing

Risk 3: Data Loss

- Mitigation: Regular backups, database replication, disaster recovery

10.2 Business Risks

Risk 1: Low User Adoption

- Mitigation: Marketing strategy, user incentives, referral programs

Risk 2: Fraudulent Listings

- Mitigation: Admin verification, user reviews, reporting mechanism

Risk 3: Competition

- Mitigation: Unique features, better UX, continuous innovation
-

11. SUCCESS METRICS**11.1 Key Performance Indicators (KPIs)****User Metrics:**

- Number of registered users
- Active users (daily/monthly)
- User retention rate
- Registration conversion rate

Property Metrics:

- Number of listed properties
- Property views
- Successful bookings
- Average time to book

Platform Metrics:

- Response time
- Uptime percentage
- Bug reports
- User satisfaction score

11.2 Success Criteria**Phase 1 (MVP):**

- 100+ registered users
- 50+ properties listed
- 20+ successful bookings
- <2s average page load time
- 99% uptime

12. IMPLEMENTATION ROADMAP

12.1 Development Phases

Phase 1: Foundation (Week 1-2)

- Project setup
- Database design
- Authentication system
- Basic UI framework

Phase 2: Core Features (Week 3-4)

- User dashboards
- Property CRUD
- Admin approval system
- Booking system

Phase 3: Enhancement (Week 5-6)

- Advanced filtering
- Image upload
- Search optimization
- UI/UX improvements

Phase 4: Testing & Deployment (Week 7-8)

- Unit testing
- Integration testing
- Bug fixes
- Deployment

13. CONCLUSION

The brainstorming session has successfully identified:

1. Clear market gaps in property rental space
2. Well-defined problems for all stakeholders
3. Comprehensive solution approach
4. Appropriate technology stack
5. Viable business model

6. Risk mitigation strategies
7. Clear success metrics

Next Steps:

- Define detailed problem statements
- Create empathy maps for user personas
- Develop requirement specifications
- Design system architecture

Document Status: Completed

Date: 28 February 2026

This document is part of the House Hunt project documentation package prepared for Smart Bridge Virtual Internship evaluation.
